

Microsoft Dynamics NAV

Maximising value through business insight
Business Intelligence White Paper
October 2013

CONTENTS

“Reports were tedious. Earlier it would take days for manual collation. Now all this is available at the click of a button.”

“We discovered that Microsoft Dynamics NAV provides options for optimal analysis and reporting, creates and consolidates reports, and looks for trends and relationships, which was exactly what we needed,”

D. K. Raina
Finance Controller
The Federation of Indian
Chambers of Commerce
and Industry

Conclusion	10

Introduction

Running a successful business depends on the ability to gain insight into business data and extract and present information in a meaningful way. A company's employees need to be able to transform data into actionable insight no matter where they are located in the organization.

This white paper discusses how the business intelligence capabilities available with Microsoft Dynamics® ERP can help people make informed decision-as a natural part of their everyday work experience.

Microsoft Dynamics provides business insight through the tools users already have on their desktop. Flexible and comprehensive reporting tools, simple business intelligence capabilities and a Microsoft SQL platform for data access provide the right fit for the needs of small and mid-sized companies.

To highlight how Microsoft Dynamics NAV business intelligence capabilities equip organizations to make smart decisions, we organize these capabilities around *three core business needs*:

Reporting. To keep business on track, it's essential to monitor current activity and compare it to historical performance and plans. The user needs easy access to specific data related to their task or role, the ability to perform repetitive business processes and have formatted grouped data – all as part of the standard application and setup.

Charts and KPI's. Monitoring organization performance and drilling into more detail when trends are spotted provides more insight into how the business is performing. The user needs access to simple, easily identifiable business drivers to see the organization at a glance.

Ad-hoc Query and Analysis. Robust analysis capabilities within an easy and familiar tool like Microsoft Office Excel enable the actionable insight required to change the direction of a negative trend or take advantage of a positive trend. To remain competitive, companies must be able to compare plans to actuals, analyze that information, make the necessary adjustments, and then take action to move forward. In this scenario, the user needs to address specific business questions and problems and perform data calculations.

Reporting

Business performance depends on the ability to track activities that span from financial transactions and performance reports to compliance records. Accurate monitoring requires a wide range of integrated capabilities. Microsoft Dynamics NAV delivers monitoring capabilities to provide organizations with the comprehensive view of the information they need through Microsoft SQL and native reporting options.

Document Reports and Standard Reports

With Microsoft Dynamics NAV, you can monitor the state of the business in both generic and predefined ways within the application.

Data Lists provides the end user with the ability to make targeted data overviews through filterable lists of business data. Each list can be customized to the individual depending on roles and needs.

Document reports enable a precision layout of data with emphasis on presentation of data as well as distribution. Take advantage of the power of Microsoft Office Word and PDF to quickly create well-designed invoices and other customer and partner-facing documents that draw information directly from Microsoft Dynamics NAV, and email them with personalized messages.

Microsoft Dynamics NAV also provides a set of predefined reports supporting all business processes within your organization. This gives the user a consistent overview of the business.

Figure 1: There are more than 300 standard reports across the functional areas of Microsoft Dynamics NAV.

Microsoft SQL Server Reporting Services Reports

In addition to the traditional reporting available within Microsoft Dynamics NAV, it is possible to integrate to Microsoft SQL Server Reporting Services to support needs for interactive, Web-based reports.

Direct access to Microsoft SQL Server enables efficient and powerful reporting. Microsoft SQL Server Reporting Services is a comprehensive, server-based solution that enables the creation, management, and delivery of both traditional, paper-oriented reports and interactive, Web-based reports. Microsoft SQL Server Reporting Services supports the full reporting lifecycle, including report authoring, management, delivery, and security.

Microsoft Dynamics NAV 2013 R2 now leverages Microsoft SQL Server Reporting Services 2012 Report Builder 3.0. The Report Builder is a report authoring tool that features a Microsoft Office-like authoring environment. New features such as new sparkline, data bar, and indicator data visualizations, the ability to save report items as report parts, a wizard for creating maps, aggregates of aggregates, and enhanced support for expressions are all part of the tool for creating and customizing reports.

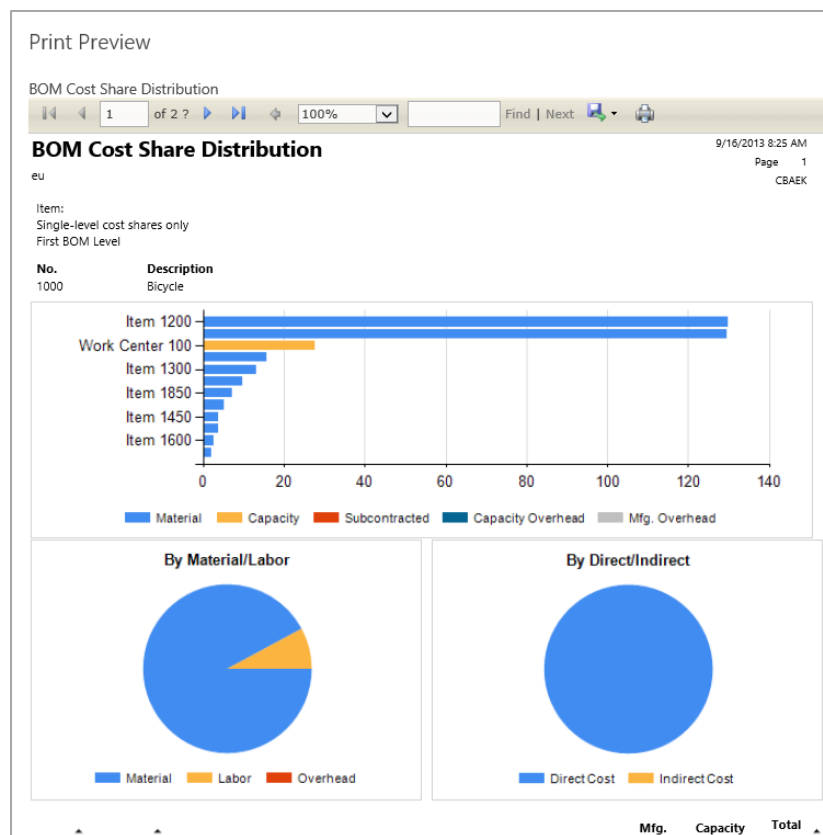

Figure 2: Gain greater insight with Microsoft Dynamics NAV and SQL Reporting Services

Management can:

- Gain visibility and insight into how your business is performing
Define who on your team makes business critical decisions on your behalf and help them respond quickly and confidently.
- Look up specific data related to their role like budget versus actual spend

Finance can:

- Always get the correct overview of the trial balance
Spot opportunities fast, identify potential problems before they occur, and take quick action.

Sales can:

- Get a quick overview of how many orders are handled per day with access to details on actual customers
Identify your top customers and what drives their profitability to help you focus on new ways to increase your sales opportunities.

Charts and KPIs

Monitor the status of the organization at a glance with charts and KPIs. Charts and KPIs make it possible for you and your employees to spot trends faster.

Charts and Graphs

Microsoft Dynamics NAV provides a large number of built-in charts and graphs rendered in various forms based on role preferences. The user is also provided with the ability to drill down into various levels of detail. Charts are available both in the Windows and Web client for Microsoft Dynamics NAV 2013 R2 on any list place and can be customized to display the information the customer is looking for.

Advanced Visualization

Microsoft Dynamics NAV also offers advanced visualization capabilities to do visual explorations and intuitive interactions.

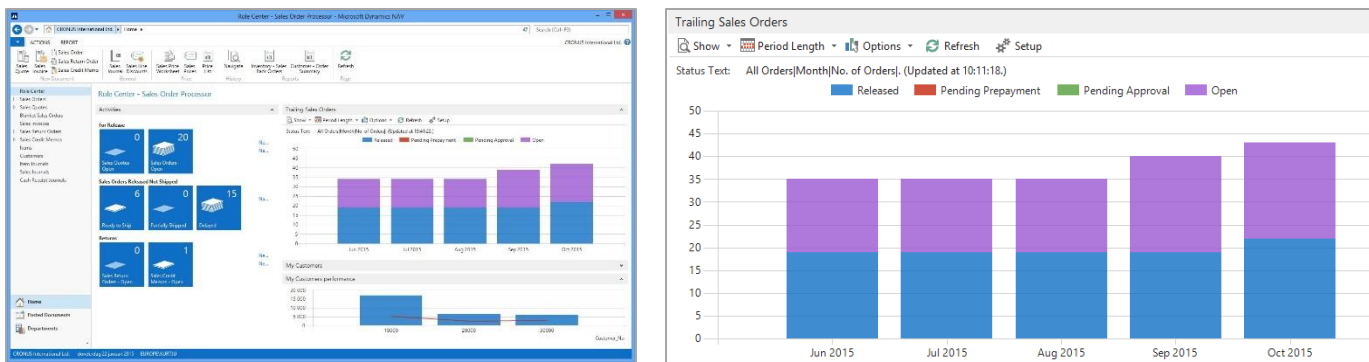

Figure 3: Microsoft Dynamics NAV comes with a wide variety of customized charts out of the box

Management can:

- Explore data visually and gain insight into, P&L performance

Finance can:

- Identify items of interest, outliers and transfer into Actionable Tasks like: What is my change in expenses?

Sales can:

- Change data interactively and visualize potential consequences for chosen actions within the sales process: How is my overall order status?

Ad-Hoc Query and Analysis

Businesses need robust analytic tools to turn information into forward-thinking insight, such as the insight needed to change the direction of a negative trend or take advantage of a positive trend. Microsoft Dynamics NAV provides simple but powerful analysis and reporting tools that enable this kind of business intelligence.

Account schedules

Analyze data from the General Ledger, Sales and Purchase, and Inventory. Compare data to budgets across time, departments, projects, campaigns, and other dimensions. The easily defined line and column layout provides users with a comprehensive and tabular form of analysis. Results can be presented in print, in a window from which users can easily navigate to original entries and documents, and/or in Microsoft Office Excel for further processing.

Analysis views

Gain a comprehensive understanding of the business and its activities with this multilevel and multidimensional business insight capability. Create analysis views for different purposes. For example, users can see an analysis view relating to sales in a particular area for a particular time period and for a particular group of customers. The views can easily be sent to Microsoft Office Excel, where the automatic creation of relevant PivotTable® views enables users to drag fields and use additional measures, dimensions and criteria.

Jet Reports Express

Through easier ad-hoc reporting, you can get the answers you need to questions about your business – from finance and sales queries to key performance metrics. Use the intuitive interface of Jet Reports Express and simple formulas in Microsoft Office Excel to create high-impact reports. Take advantage of the multiple report templates available out of the box and present your findings in a single, well-formatted report.

Table Builder. Answer and analyze ad-hoc business queries quickly and accurately in Microsoft Office Excel with real time data from Microsoft Dynamics NAV by using Table Builder. Access and combine all the data you need from your business system – including tables, fields, flow fields and dimensions. Slice and dice data and consolidate information and analysis across companies or databases. With just one click, you can drill down into any value in a report to see the underlying data.

General Ledger function. Allows you to report from all areas of their general ledger and do Financial reporting within a familiar and flexible environment.

Report Player. You can also use the Report Player to get fast access to your reports in Microsoft Office Excel as well as get a quick overview of progress or latest's update right on your desktop. Go to the Windows 8 app store to download the app.

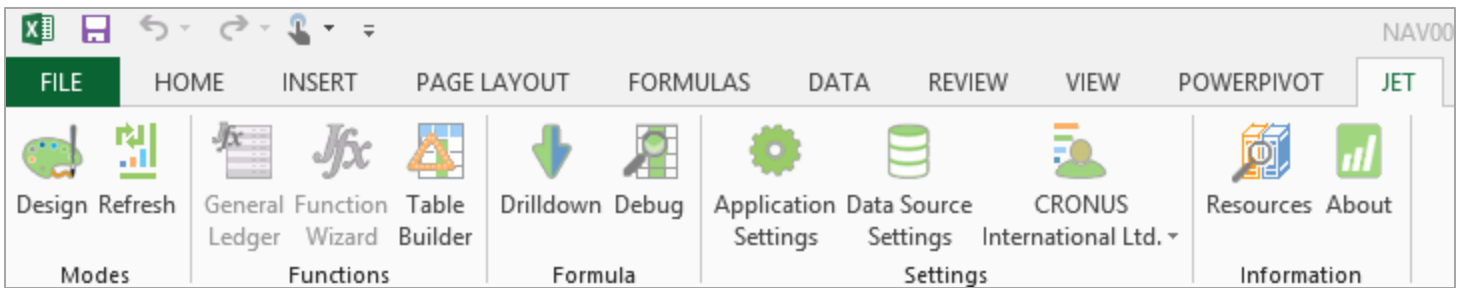

Figure 4: Intuitive and simple analysis features in Jet Reports Express

Figure 5: The Report Library provides easy overview of your Microsoft Excel reports right from your desktop

Management can:

- Track consolidated profit and loss by division and company

Finance can:

- Stay on top of accounts receivable KPIs in terms of days outstanding, past collection performance and more.

Sales can:

- Easily build product sheets that pull current pricing and specifications, and instantly update and release important changes.

CONCLUSION

Understanding your business data is an important part of running a successful business. Microsoft Dynamics NAV helps enable better business insight for your entire company. With Microsoft Dynamics NAV, you and your employees can get the answers you need to your specific business questions – fast – through high-impact reports, charts and simple analysis.

Microsoft Dynamics NAV offers a Business Insight platform based entirely on the Microsoft stack through Microsoft SQL Server, Microsoft Office and Microsoft SharePoint as a platform for collaboration and distribution. This enables you and your employees to take full advantage of your investments in your Microsoft applications, get more out of the tools you have on your desktop and get your business insight needs covered.

"We needed a way to tie all our information together so that we could fully comprehend what customers were buying and then purchase according to those trends; understand our prices and costs; and control our margins," Earnshaw explains. "In a highly competitive market that deals in high volumes and sells products with thin margins, establishing such visibility and control is absolutely critical for us."

*Jay Earnshaw,
General Operations
Manager, Dutch
